Air engine 2 I had previously built a reciprocating air engine out of wood back in 1985, and posted it here in 2007. I received a number of enquiries for plans for that engine, but the design for that air engine wasn't really one that lent itself to building from plans. So I came up with a better design for my air engine 2.

Air Engine : 21 Steps (with Pictures) - Instructables

This type of engine is called a wobbler because there is no connecting rod or wristpin- the entire cylinder and piston pivot as the crank spins, and as it pivots side to side compressed air (or steam or compressed CO2) is ported in at the right time to push the piston down. There's a basic run down for you, so here's how we build it!

All Franklin cars were air-cooled, which the company considered simpler and more reliable than water cooling, and the company considered light weight to be critical in making a well-performing car given the limited power of the engines then available. Most Franklins were wood-framed, though the very first used an angle iron frame (1902) and ...

A hot air engine (historically called an air engine or caloric engine) is any heat engine that uses the expansion and contraction of air under the influence of a temperature change to convert thermal energy into mechanical work. These engines may be based on a number of thermodynamic cycles encompassing both open cycle devices such as those of Sir George Cayley and John Ericsson and the closed ...
