A concise yet detailed guide to the standards applying to fixed-line and mobile digital television and the underlying principles involved.

This second edition represents an extensive revision of the first edition, - though the motivation for the book and the intended audiences, as described in the previous preface, remain the same. The overall length has been increased substantially, with revised or expanded discussions of a number of topics, - including Yucca Mountain repository plans, new reactor designs, health effects of radiation, costs of electricity, and dangers from terrorism and weapons proliferation. The overall status of nuclear power has changed rather little over the past eight years. Nuclear reactor construction remains at a very low ebb in much of the world, with the exception of Asia, while nuclear power's share of the electricity supply continues to be about 75% in France and 20% in the United States. However, there are signs of a heightened interest in considering possible nuclear growth. In the late 1990s, the U. S. Department of Energy began new programs to stimulate research and planning for future reactors, and many candidate designs are now contending—at least on paper—to be the next generation leaders. Outside the United States, the commercial development of the Pebble Bed Modular Reactor is being pursued in South Africa, a French-German consortium has won an order from Finland for the long-planned EPR (European Pressurized Water Reactor), and new reactors have been built or planned in Asia. In an unanticipated positive development for nuclear energy, the capacity factor of U. S. reactors has increased dramatically in recent years, and most operating reactors now appear headed for 20-year license renewals.

The Australian continent provides a unique perspective on the evolution and ecology of carnivorous animals. In earlier ages, Australia provided the arena for a spectacular radiation of marsupial and reptilian predators. The causes of their extinctions are still the subject of debate. Since European settlement, Australia has seen the extinction of one large marsupial predator (the thylacine), another (the Tasmanian devil) is in danger of imminent extinction, and still others have suffered dramatic declines. By contrast, two recently-introduced predators, the fox and cat, have been spectacularly successful, with devastating impacts on the Australian fauna. *Carnivores of Australia: Past, Present and Future* explores Australia's unique predator communities from pre-historic, historic and current perspectives. It covers mammalian, reptilian and avian carnivores, both native and introduced to Australia. It also examines the debate surrounding how best to manage predators to protect livestock and native biodiversity. Readers will benefit from the most up-to-date synthesis by leading researchers and managers in the field of carnivore biology. By emphasising Australian carnivores as exemplars of flesh-eaters in other parts of the world, this book will be an important reference for researchers, wildlife managers and students worldwide.

The Problem of a Chinese Aesthetic calls for and applies a new model of comparative literature - one that, instead of taking for granted the commensurability of traditions and texts, gives incompatibility and contradiction their due. Exposing contemporary literary theory to the risks of ancient Chinese literature (and vice versa), this book considers a linked series of case studies. To what degree does the translation between languages and texts that we call comparative literature depend on allegory or translation within a single text or language? The author offers an important, new perspective on the reading of the Shih-ching or Book of Odes and the question of allegory and metaphor in the Chinese poetic tradition.

The present book is an authoritative and authentic source for the study of Indian coins. It not only describes the coins but also studies them critically in all their aspects. The points which are dealt with here are on numismatic studies in India; Satamana and Sana; Kautilya and Buddhaghosa on coins; silver coins of Vasisthiputra Satakarni; alleged coins of the Mahisa kings; coins of semi-independent rulers; date of Isvaradatta's coins; Petluripalem hoard; some problems of tribal coins; coins of Kumaragupta I, Harigupta and Ramagupta; coins of Muhammad bin Sam and Prthviraja; coins of Kakatiya Prataparudra I; Gajapati Pagoda, Ganga Fanam and Ramatanka; coins of Bhairavasimha; Maratha mint under the Peshwas; Cowrie-shell, rupee and pice. In describing the features of a particular class of coins from the standpoint of standard, style and fabric or in discussing the significance of the numismatic terms, the author has utilized the literary data which have a bearing on them.

Fourth edition of the industry-renowned Railway Engineering Encyclopaedia. Expanded, enhanced, fully cross-referenced and illustrated throughout this is an indispensable book for minister, professional, trainee and enthusiast alike.

This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. To ensure a quality reading experience, this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy-to-read typeface. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.
