Mirroring the latest developments in materials, methods, codes, and standards in building and bridge design, this is a one-of-a-kind, definitive reference for engineers. Updated to reflect the latest provisions of the AISC (American Institute of Steel Construction), AASHTO (American Association of State Highway & Transportation Officials) and AISI (American Iron and Steel Institute) codes Combines detailed examples with the most current design codes and standards Numerous tables, charts, formulas, and illustrations Contents: Properties of Structural Steels and Effects of Steelmaking

the undergraduate course in structural steel design using the Load and Resistance Factor Design Method (LRFD). The text also enables practicing engineers who have been trained to use the Allowable Stress Design procedure (ASD) to change easily to this more economical and realistic method for proportioning steel structures. The book comes with problem-solving software tied to chapter exercises which allows student to specify parameters for particular
