Find soul mate...check. Harness the power of the Wiccan gods...check. Defeat the evil First Traveler...check. Live a normal life...maybe not. Dagny and Marc are done with destiny. After defeating the First Traveler, they want to leave the Wiccan world behind. But as they settle back into the routine of high school, it seems destiny has other plans. Prophetic dreams, a secret cult and a stranger calling himself the Guardian force Dagny and Marc to face the truth. Channeling the powers of the gods comes with a price and the gods have come to collect. Now Dagny and Marc must choose between each other and the path the gods have written, a path leading to a mysterious gateway that if opened will shatter the Wiccan world. Their love survived the threat of an ancient witch, but can it survive the will of the gods? In this story of love, betrayal and magic, no one is safe and there is no such thing as destiny.

Gateway is an academically-rich five-level course designed to lead teenage students to success in school-leaving and university entrance exams and prepare them for university and the world of work.

Wangari Maathai, founder of The Green Belt Movement, tells its story including the philosophy behind it, its challenges, and objectives.

Helps students prepare and practise for their school-leaving exams and equips them with lifelong learning and study skills. Taking an inductive approach to Grammar, this title revises and extends the students' knowledge of grammar and vocabulary through varied skills-based activities that recycle, revise, evaluate and develop language skills.

Challenge: Can you find all the integers  $a, b, c$  satisfying  $2a^2+3b^2=5c^2$ ? Looks simple, and there are in fact a number of easy solutions. But most of them turn out to be anything but obvious! There are infinitely many possibilities, and as any computer will tell you, each of  $a, b, c$  will usually be large. So the challenge remains ... Find all integers  $a, b, c$  satisfying  $2a^2+3b^2=5c^2$  A major advance in number theory means this book can give an easy answer to this and countless similar questions. The idea behind the approach is transforming a degree-two equation in integer variables  $a, b, c$  into a plane curve defined by a polynomial. Working with the curve makes obtaining solutions far easier, and the geometric solutions then get translated back into integers. This method morphs hard problems into routine ones and typically requires no more than high school math. (The complete solution to  $2a^2+3b^2=5c^2$  is included in the book.) In addition to equations of degree two, the book addresses degree-three equations—a branch of number theory that is today something of a cottage industry, and these problems translate into “ elliptic curves ” . This important part of the book includes many pictures along with the exposition, making the material meaningful and easy to grasp. This book will fit nicely into an introductory course on number theory. In addition, the many solved examples, illustrations, and exercises make self-studying the book an option for students, thus becoming a natural candidate for a capstone course.
