Since 24 is an even number, let's use the idea of doubling and halving to solve this problem quickly. What do I mean by doubling and halving? Well, the trick is to continually double one number while halving the other. In this case, this means that we turn the problem  $47 \times 24$  into the problem  $94 \times 12$  by simultaneously doubling 47 and halving 24.
