Math is a cumulative, vertically structured discipline. One learns math by building on the math that one has previously learned. That, of course, sounds like Constructivism. In brief summary, here is a constructivist approach to thinking about mathematics education.

The theory of distributions is an extension of classical analysis, an area of particular importance in the field of linear partial differential equations. Underlying it is the theory of topological vector spaces, but it is possible to give a systematic presentation without a knowledge of this. The ...

Learning Theories and Teaching Methods Learning is one of the significant features of current psychology. Learning theories and teaching methods have been used in different educational systems around the world. Teaching methods involve the use of learning theories and each theory has different outcomes in mathematics education.

Well, a loop like the one at the left is considered a knot in mathematical knot theory (it is a simple closed curve in 3-dimensional space). In fact this knot has a special name: the unknot. The unknot can be drawn with no crossings, and is also called a trivial knot. It is the simplest of all knots. 2) The Central Problem of Knot Theory

Introduction to Knots – Knot Theory  
Computational learning theory, or CoLT for short, is a field of study concerned with the use of formal mathematical methods applied to learning systems. It seeks to use the tools of theoretical computer science to quantify learning problems. This includes characterizing the difficulty of learning specific tasks.

School math typically focuses on learning procedures to solve highly stereotyped problems. Professional mathematicians think a certain way to solve real problems, problems that can arise from the everyday world, or from science, or from within mathematics itself. The key to success in school math is to learn to think inside-the-box.

Introduction to Mathematical Thinking | Stanford Online  
Mathematical thinking is not the same as doing mathematics – at least not as mathematics is typically presented in our school system. School math typically focuses on learning procedures to solve highly stereotyped problems. Professional mathematicians think a certain way to solve real problems, problems that can arise from the everyday world, or from science, or from within mathematics itself.
