Background HIV prevalence among pregnant women in Malawi is 12.6%, and mother-to-child transmission is a major route of transmission. As PMTCT services have expanded in Malawi in recent years, we sought to determine uptake of services, HIV-relevant infant feeding practices and mother-child health outcomes.

### ~~Uptake and outcomes of a prevention of mother to child ...~~

PMTCT services were reported to be available in all ANC facilities in Malawi in 2010. HIV testing coverage among pregnant women decreased slightly from 66% in 2010 to 64% in 2011 and remains lower than expected.

This report assesses some of the most important actions and changes for children affected by AIDS that occurred in the first year of the global campaign 'Unite for Children. Unite against AIDS'. Produced by UNICEF, UNAIDS and WHO, the report notes promising developments, such as increasing numbers of children receiving treatment, declining HIV prevalence among young people resulting from behavioural change, and the integration of children and AIDS into national policy frameworks. However, it also highlights the huge gaps in progress that remain and seeks to explore how the campaign must move forward in 2007 in order to achieve its ambitious goals.

The fourth edition of Facts for Life contains essential information that families and communities need to know to raise healthy children. This handbook provides practical advice on pregnancy, childbirth, childhood illnesses, child development and the care of children. This edition also features a new chapter on child protection. The book is intended for parents, families, health workers, teachers, youth groups, women's groups, community organisations, government officials, employers, trade unions, media, and non-governmental and faith-based organisations.

This Stocktaking Report, the third since the Unite for Children, Unite against AIDS initiative was launched in 2005, examines data on progress, emerging evidence, and current knowledge and practice for children as they relate to four programme areas known as the "Four Ps": preventing mother-to child transmission of HIV, providing paediatric HIV care and treatment, preventing infection among adolescents and young people, and protecting and supporting children affected by HIV and AIDS.
