These guidelines have been approved by the four organizations that make up the Cooperating Parties for the ICD-10-CM: the American Hospital Association (AHA), the American Health Information Management Association (AHIMA), CMS, and NCHS. These guidelines are a set of rules that have been developed to accompany and complement the official conventions and instructions provided within the ICD-10-CM itself. The instructions and conventions of the classification take precedence over guidelines. These guidelines are based on the coding and sequencing instructions in the Tabular List and Alphabetic Index of ICD-10-CM, but provide additional instruction. Adherence to these guidelines when assigning ICD-10-CM diagnosis codes is required under the Health Insurance Portability and Accountability Act (HIPAA). The diagnosis codes (Tabular List and Alphabetic Index) have been adopted under HIPAA for all healthcare settings. A joint effort between the healthcare provider and the coder is essential to achieve complete and accurate documentation, code assignment, and reporting of diagnoses and procedures. These guidelines have been developed to assist both the healthcare provider and the coder in identifying those diagnoses that are to be reported. The importance of consistent, complete documentation in the medical record cannot be overemphasized. Without such documentation accurate coding cannot be achieved. The entire record should be reviewed to determine the specific reason for the encounter and the conditions treated.

ICD-10-CM 2018: The Complete Official Codebook provides the entire updated code set for diagnostic coding. This codebook is the cornerstone for establishing medical necessity, determining coverage and ensuring appropriate reimbursement.

Subcortical Stroke is a new and fully revised edition of Lancunar and Other Subcortical Infractions(OUP, 1995). Stroke is one of the most common causes of death and subcortical stroke accounts for 20-30% of all cerebrovascular infarcts. Our understanding of stroke processes in general, and subcortical stroke in particular, has advanced considerably in recent years. Research findings from the fields of neurochemistry, imaging and genetics have provided insight and input to our understanding of this condition, and this new edition provides an opportunity to describe these advances, and to relate the findings to the clinical expression, neural mechanism, prognosis and treatment of subcortical stroke. In addition, new subcortical syndromes such as CADASIL are covered, as is subcortical haemorrhage. This book presents a comprehensive and authoritative review of the field with contributions from the leading international experts. Subcortical Stroke is for stroke physicians, neurologists and those researching cerebrovascular diseases.

You have just encountered a possible stroke patient. You ask yourself: what should I do first? How do I know it is a stroke? Is it too late to reverse the damage? How do I do the right things in the right order? This book will help you answer these critical questions. It provides practical advice on the care of stroke patients in a range of acute settings. The content is arranged in chronological order, covering the things to consider in assessing and treating the patient in the emergency department, the stroke unit and then on transfer to a rehabilitation facility. All types of stroke are covered. This new edition provides updated information from recently completed clinical trials and added information on endovascular therapy, hemicraniectomy for severe stroke, DVT prophylaxis and stroke prevention. A comprehensive set of appendices contain useful reference information including dosing algorithms, conversion factors and stroke scales.

An essential companion for busy professionals seeking to navigate stroke-related clinical situations successfully and make quick informed treatment decisions.

This issue is a dedicated supplement published in addition to the regular issues of 'Cerebrovascular Diseases' focussing on one specific topic. 'Cerebrovascular Diseases' is a well-respected, international peer-reviewed journal in Neurology. Supplement issues are included in the subscription.

The neuro rehab text that mirrors how you learn and how you practice! Take an evidence-based approach to the neurorehabilitation of adult and pediatric patients across the lifespan that reflects the APTA 's patient management model and the WHO 's International Classification of Function (ICF). You ' ll study examination and interventions from the body structure/function impairments and functional activity limitations commonly encountered in patients with neurologic disorders. Then, understanding the disablement process, you ' ll be able to organize the clinical data that leads to therapeutic interventions for specific impairments that can then be applied as appropriate anytime that impairment is detected, regardless of the medical diagnosis.

This book contains a compilation of the revolution of mechanical thrombectomy (MT) in the treatment of strokes. The initial chapters summarize information about the best medical management of acute ischemic stroke, imaging modalities and patient selection for MT. The book then focuses on the nuances of MT, providing detailed information about the best approaches for anesthesia during MT, access, intra-arterial thrombolysis, recent devices and catheters and technical pitfalls of MT. A specific chapter is dedicated to MT in the venous system. This is followed by a chapter about the most common complications of MT and post-procedural care of these patients. The last chapter covers different aspects of acute stroke care and MT in the developing world. The authors of this book comprise of a multidisciplinary group of world experts in the field and were encouraged to include teaching cases to deliver a book with a practical approach. Acute Stroke Management in the Era of Thrombectomy is intended for all healthcare providers who care for patients with stroke; with special emphasis for the proceduralists who are interested in technical tips to improve outcomes and minimize complications.

This complete self-study course on coding combines content, practice, and self-assessment into one online learning tool that the learner can follow at his or her own pace. The online program assumes the role of instructor, guiding individuals through the material and directing them when to read relevant sections from the text, checking their comprehension along the way, and providing feedback and encouragement. Users follow the program and learn at their own pace, working through chapter "lesson lectures" and reading assigned sections of the text as they progress. Interactive exercises, questions, and activities allow users to check their comprehension and learn from immediate feedback. Illustrations clarify concepts and familiarize students with the clinical procedures they are learning to code. Chapter exams are scored and incorporated in a grade book, which users can view to evaluate their progress. A series of approximately 18 SlideShows with audio narration explain and demonstrate clinical procedures. Hypertext links incorporated into the lesson lectures open pop-up boxes with further explanations and/or definitions of concepts and terms. Links to relevant web sites provide additional resources to enhance learning or stimulate discussion within a cohort group. An extensive glossary of approximately 650 terms provides correct definition for key terms throughout the course. All content has been updated to current industry standards; for use with Step-by-Step Medical Coding, 5th Edition ensuring that students learn from the most up-to-date material available. Each online chapter includes engaging "lesson lectures" by the author, guiding the learner through the online and text content. Interspersed self-comprehension questions, learning activities, and lesson quizzes throughout the online content allow learners to check their comprehension and learn from feedback. End-of-chapter review and self-assessment exercises include a specially created case-based coding activity, as well as matching, fill-in-the-blank, and multiple choice. Answers to the textbook exercises allow students to check their work on the exercises printed in the text against the answers posted within the course.
