The electric field created by a charge is equal to the force generated divided by the charge.
$$E = \frac{k \cdot q}{r^2}$$
 Electric field is equal to a constant, “ k ”, times the charge divided by the square of the distance between the charge and the point in question.

Get Free Electric Fields Study Guide Physics Answers Electric Field The electric field is defined as the force acting on a positive test charge, per unit charge. $\vec{E} = \frac{\vec{F}}{q_0}$ \vec{E} points in direction of $q > 0$ \vec{E} Units are thus N/C for the electric field. It is similar to the gravitational field on the surface of the Earth for a test mass m_0 : $m_0 \vec{g} = \vec{F}$

So far in this unit we 've studied stationary charges that have constant electric fields, which is known as electrostatics. Magnetostatics, on the other hand, deal with steady currents that create constant magnetic fields as well as the ferromagnetic materials which produce constant magnetic fields. We 've talked enough about those before, though, so we turn our attention to the magnetic fields created by currents of electricity.
