A rocket engine is generally throwing mass in the form of a high-pressure gas.

The engine throws the mass of gas out in one direction in order to get a reaction in the opposite direction. The mass comes from the weight of the fuel that the rocket engine

Get Free Rocket Engineering

burns.

How Rocket Engines Work |

HowStuffWorks

A rocket engine uses stored rocket propellants as the reaction mass for forming a high-speed propulsive jet of fluid, usually high-temperature gas.

Get Free Rocket Engineering

Rocket engines are reaction engines, producing thrust by ejecting mass rearward, in accordance with Newton's third law.
