This text is intended for use in the Java programming course Tony Gaddis's accessible, step-by-step presentation helps beginning students understand the important details necessary to become skilled programmers at an introductory level. Gaddis motivates the study of both programming skills and the Java programming language by presenting all the details needed to understand the "how" and the "why"—but never losing sight of the fact that most beginners struggle with this material. His approach is both gradual and highly accessible, ensuring that students understand the logic behind developing high-quality programs. In *Starting Out with Java: Early Objects*, Gaddis looks at objects—the fundamentals of classes and methods—before covering procedural programming. As with all Gaddis texts, clear and easy-to-read code listings, concise and practical real-world examples, and an abundance of exercises appear in every chapter.

**Teaching and Learning Experience** This program presents a better teaching and learning experience—for you and your students. **Enhance Learning with the Gaddis Approach:** Gaddis's accessible approach features clear and easy-to-read code listings, concise real-world examples, and exercises in every chapter. **Keep Your Course Current:** Content is refreshed to provide the most up-to-date information on new technologies for your course. **Support Instructors and Students:** Student and instructor resources are available to expand on the topics presented in the text.

Learning a complex new language is no easy task especially when it's an object-oriented computer programming language like Java. You might think the problem is your brain. It seems to have a mind of its own, a mind that doesn't always want to take in the dry, technical stuff you're forced to study. The fact is your brain craves novelty. It's constantly searching, scanning, waiting for something unusual to

happen. After all, that's the way it was built to help you stay alive. It takes all the routine, ordinary, dull stuff and filters it to the background so it won't interfere with your brain's real work--recording things that matter. How does your brain know what matters? It's like the creators of the Head First approach say, suppose you're out for a hike and a tiger jumps in front of you, what happens in your brain? Neurons fire. Emotions crank up. Chemicals surge. That's how your brain knows. And that's how your brain will learn Java. Head First Java combines puzzles, strong visuals, mysteries, and soul-searching interviews with famous Java objects to engage you in many different ways. It's fast, it's fun, and it's effective. And, despite its playful appearance, Head First Java is serious stuff: a complete introduction to object-oriented programming and Java. You'll learn everything from the fundamentals to advanced topics, including threads, network sockets, and distributed programming with RMI. And the new, second edition focuses on Java 5.0, the latest version of the Java language and development platform. Because Java 5.0 is a major update to the platform, with deep, code-level changes, even more careful study and implementation is required. So learning the Head First way is more important than ever. If you've read a Head First book, you know what to expect--a visually rich format designed for the way your brain works. If you haven't, you're in for a treat. You'll see why people say it's unlike any other Java book you've ever read. By exploiting how your brain works, Head First Java compresses the time it takes to learn and retain--complex information. Its unique approach not only shows you what you need to know about Java syntax, it teaches you to think like a Java programmer. If you want to be bored, buy some other book. But if you want to understand Java, this book's for you.

Starting Out with Alice: A Visual Introduction to Programming presents a fun and motivational way for novice programmers to learn the basic tenets of programming. Using Alice, an innovative and increasingly popular teaching tool, readers from a variety of backgrounds create virtual programming worlds of animations and computer games. In the successful style of Tony Gaddis' texts, useful examples and detail-oriented explanations allow students to become comfortable with fundamental concepts of programming without dealing with frustrating syntax errors and complex design techniques. With the knowledge acquired using Alice, students gain confidence in their skills to transition into Java or other programming languages.

Starting Out with Java: From Control Structures through Data Structures is designed to be used in a 2 or 3 semester/quarter sequence for beginning programmers. Tony Gaddis emphasizes problem-solving and program design by teaching the Java programming language through a step-by-step detailed presentation. He introduces procedural programming early and covers control structures and methods before objects. Students are engaged and have plenty of opportunity to practice using programming concepts through practical tools that include end-of-section and chapter exercises, case studies and programming projects.
